

CENTRALE BANK VAN ARUBA

**As of November 1, 2023, the CBA lowered the reserve requirement rate by 1 percentage point to 22.5 percent.**

Press Release

*In line with the Monetary Policy Committee's (MPC) task to evaluate, determine, and provide transparency on the monetary policy actions of the Central Bank of Aruba (CBA), the CBA communicates the following. During its meeting of October 24, 2023, the MPC decided to reduce the reserve requirement rate by 1.0 percentage point to 22.5 percent as of November 1, 2023. Accordingly, commercial banks must hold a minimum balance at the CBA equal to 22.5 percent of their clients' liquid deposits. The decision to reduce the reserve requirement rate was based primarily on the official and international reserves remaining at an adequate level, despite incurring a decrease end- September 2023 when compared to end-2022. Furthermore, official and international reserves are foreseen to stay adequate and increase during the remainder of 2023. Additionally, aggregated excess liquidity within the commercial banking sector declined in September 2023 compared to December 2022, mostly due to increased credit. The CBA continues to monitor reserves and the excess liquidity developments, and stands ready to adjust the reserve requirement rate, if deemed necessary.*

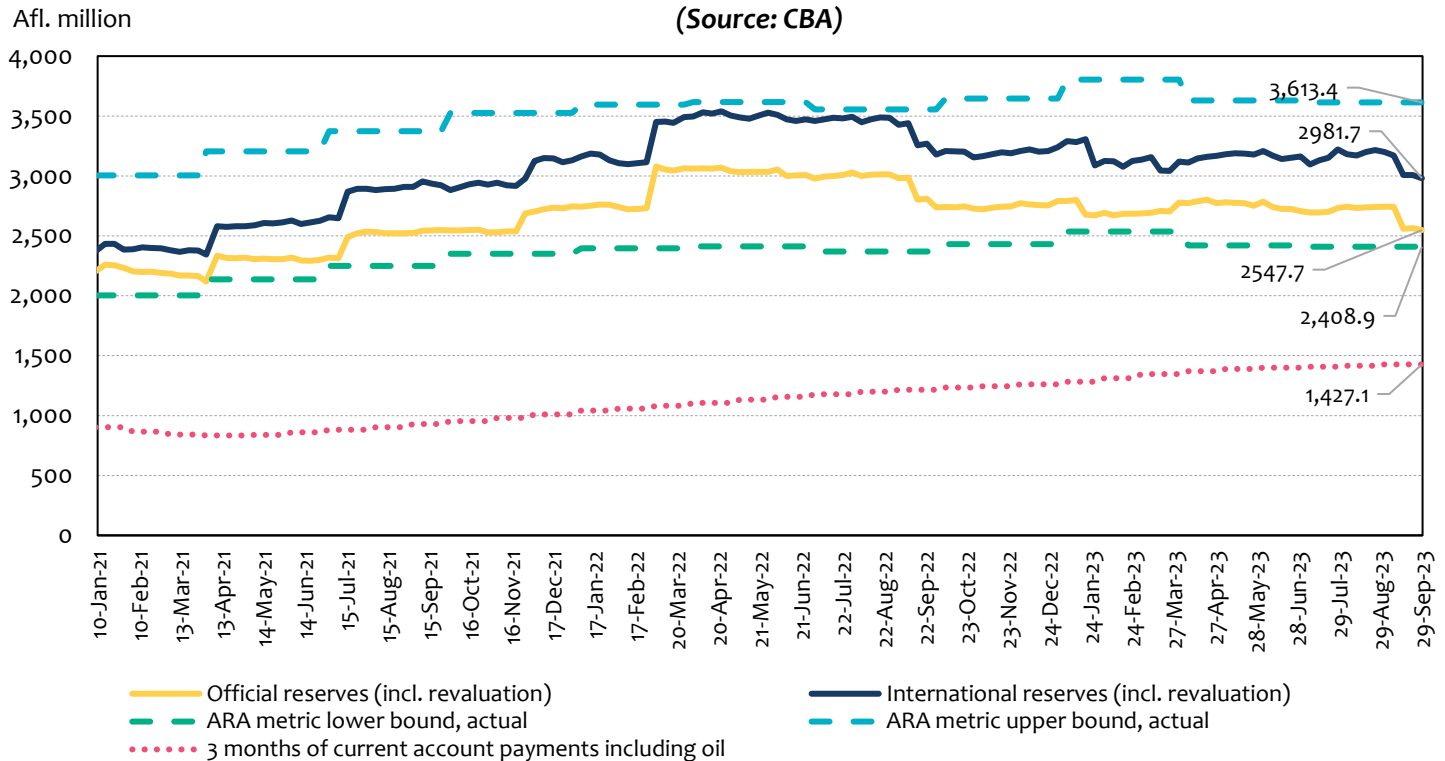

The MPC considered the following information and analysis during its deliberations.

***International and official reserves***

The international reserves, comprising the official reserves of the CBA and foreign reserves held by the commercial banks, declined by Afl. 259.6 million as of September 29, 2023, compared to end-December 2022 (Graph 1). Official reserves fell by Afl. 243.2 million, while the foreign reserves at the commercial banks went down by Afl. 16.4 million. Consequently, as of September 29, 2023, official and international reserves amounted to Afl. 2,547.7 million and Afl. 2,981.7 million, respectively.

Maintaining reserve adequacy is critical to keeping the fixed exchange rate between the Aruban florin and the US dollar. In this regard, despite aforementioned decline, international reserves stayed comfortably above the minimum required three months of current account payments as of September 2023. Current account payments consist, among others, of import payments, interest payments made to investors, and foreign transfers, such as remittances by foreign workers. Official reserves also stayed within an adequate range when benchmarked against the International Monetary Fund's (IMF) Assessing Reserve Adequacy (ARA) metric (Table 1).

**Table 1: Reserve benchmarks monitored in 2023**

	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sept
Estimated current account coverage ratio <sup>1</sup>	7.1	7.0	6.8	6.9	6.8	6.7	6.9	6.8	6.2
Estimated IMF ARA Metric <sup>2</sup>	106.6	105.3	109.6	114.9	113.6	111.8	113.5	113.8	105.8

<sup>1</sup> The number of months of current account payments covered by the international reserves.

<sup>2</sup> The ratio between the level of official reserves and the minimum adequate level (following IMF), in percent.

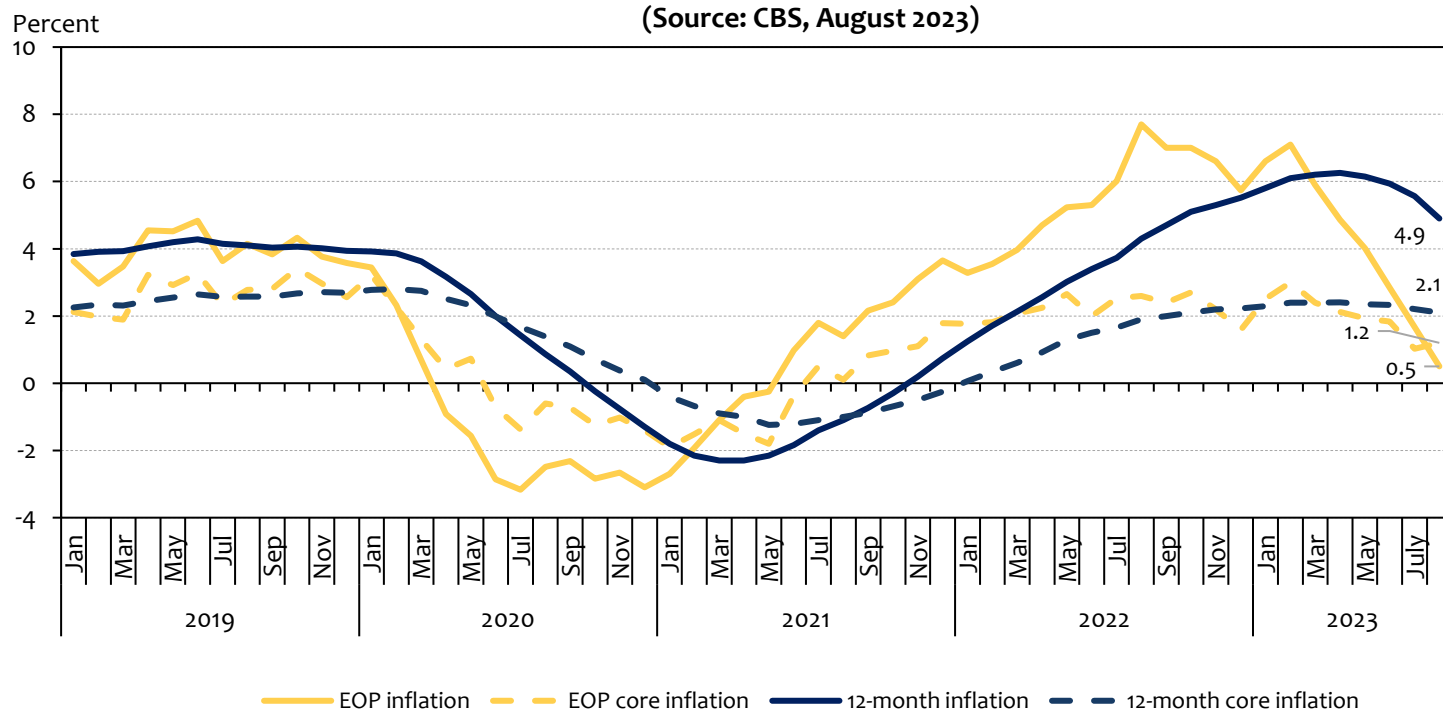

## Inflation

The End-of-Period (EOP) inflation rate eased to 0.5 percent in August 2023, down from 1.7 percent in July 2023 (Graph 2). The main contributors to the EOP inflation in August 2023 were ‘communication’ (+0.6 percentage point contribution) and ‘food and non-alcoholic beverages’ (+0.5 percentage point contribution). Albeit to a lesser degree, ‘miscellaneous goods and services’ (+0.4 percentage point contribution), ‘restaurants and hotels’ (+0.3 percentage point contribution), and ‘education’ (+0.2 percentage point contribution) also contributed to the EOP inflation in August 2023.

As of August 2023, the 12-month average inflation decelerated to 4.9 percent, down from 5.6 percent in the previous month. The inflationary pressures were mostly due to higher prices of food and non-alcoholic beverages, as well as the hikes in water and electricity tariffs as of August 2022. Furthermore, Aruba imported much of the rising prices from its trading partners, particularly the United States and Europe.

Meanwhile, in August 2023, EOP core inflation (excluding energy and food) was 1.2 percent (1.0 percent in July 2023). On a twelve-month average basis, core inflation amounted to 2.1 percent (2.2 percent in July 2023).

### **Excess liquidity of the commercial banks**

Based on weekly data, preliminary estimated excess liquidity (including undisbursed loan funds and other commitments) of the commercial banks stood at Afl. 407.0 million on September 29, 2023, i.e., an Afl. 65.5 million uptick compared to August 2023 (Graph 3). This expansion was mainly due to the 1 percentage point lowering of the reserve requirement rate as of the 1st of September 2023. However, when compared to end-December 2022, excess liquidity reflected a contraction of Afl. 412.8 million. This drop was mostly because of local refinancing of foreign loans and government bond purchases by institutional investors.
